

## OUR ENVIRONMENTAL POLICY

The environment is now a central concern for everyone. The management and the whole team of Camping Ty Nénez are committed to an environmental approach through a process of continuous improvement.

Our establishment has decided not to keep the ECOLABEL certification, a sign of environmental quality recognised at an international level.

However, we are continuing our efforts to preserve the planet and we would be pleased if you would help us to continue our efforts. Our objectives are to:

- Limit energy consumption (light bulbs, heating, ...)
- Use renewable resources
- Limit water consumption (showers, taps, maintenance, ...)
- Reduce and control waste production
- Contribute to the knowledge and preservation of the local environment (fallows, birds, insects, ...)
- Use substance that are less dangerous for the environment (eco labelled and ecological products, ...)
- Offer and use products from locals producers
- Protect biodiversity (insect hotel, endemic plants, no fertilizers or pesticides used)
- Promote alternative means of transport (bicycles, bus timetables, promotion of carpooling, ...)
- Reduce our greenhouse gas emissions (heat pump, ...)
- Reuse of paper, tourist documentation not to be thrown away and need to be brought back

These objectives are part of our daily action plans and are implemented with a view of continuous improvement.

The management is in charge of applying and communicating these principles of the Ty Nénez camping to its employees and partners, the environment is everyone's business.

Everyone can participate in our approach at their own level.

Done in PONT-SCORFF, 22 October 2017n amendment of 28/04/2016.
